Important Additional Information - Notes

The anti-knock characteristics of gasoline will be posted in terms of octane, determined by the average of research and motor methods. $(R + M)/2$

Every dispensing device used in the retail sale of gasoline shall be plainly and conspicuously labeled with the brand name or trade name of the gasoline it contains. If the product contains one percent or more ethanol or methanol, a label identifying the kind of alcohol and the percentage of each at the time of blending shall be posted on the face of the dispensing device in letters not less than one inch in height.

Each motor fuel dispensing device must be plainly and conspicuously labeled in the same terms as registered. Example: ABC Premium Unleaded 92, ABC Diesel

The minimum allowable cetane for diesel products is 40. This number is required to be posted on the device.

Please use the appropriate registration number in all correspondence, including any changes regarding the registered motor fuel.
